

Comments from Year 3 students:

'My buddy said that I explained how your brain sends messages to your muscles really well and that I said how your muscles are attached to your skeleton not just floating around and your muscles need your respiratory system because your muscles need oxygen to work. It was a good experience because when he comes into Year 3 he might choose to do the muscular system and he'll have something to start with. He can tell his parents about it too. He said he really enjoyed it.' Max 3W

'My buddy said that I gave him good information about how the immune system works and he said I could get more information about how viruses work and how they attack the body. When he's in Year 3 next year he'll know more about the immune system.' Ethan 3W

'I learnt that everyone is capable of listening if you take your time and explain it properly. Next time, I will try to make my presentation faster, so people don't get distracted. Presenting it taught me a lot about the circulatory system and stuff I never knew before.' Ruby 3S

'My experience presenting was nerve racking and I was worried that I didn't do well. Mostly, it taught me a lot about my chosen system and that you have to make it interesting.' Billy 3S
